

RELATIONAL DATABASE FOR PRODUCING BILL-OF- MATERIALS FROM PLANNING INFORMATION

Abstract of the Disclosure

A system and method for reserving manufacturing capacity to satisfy a customer deliverable order for a product. The system and method uses a relational database tool adapted to receive said customer deliverable order; and a product manager tool operatively connected to said relational database tool, said product manager tool being adapted to obtain a block of part numbers from unallocated part numbers and to supply said block of part number to said relation database.
